

Ultraprobe 10,000 Kit

UP10000LRM: ULTRAPROBE 10,000 INSPECTION SYSTEM

The Ultraprobe 10K Ultrasonic Inspection Kit brings ultrasound technology to a whole new level. With this one system, inspectors can perform condition analysis, record the sounds of test equipment, store and manage data. The UP10000 has on-board sound recording. With the push of a button, it is now possible to record a sound sample directly into the instrument and link it to one of 400 record files stored in the Ultraprobe. Manual Sensitivity & Frequency Adjustment or Revolutionary New “Smart Control” Set Up Modes.

UP10000 Kit Includes:

- Ultraprobe 10000 housing with digital LCD display and LED backlight
- Tri-Sonic Scanning Module for locating airborne ultrasound
- Rubber Focusing Probe for narrowing reception field and for shielding ambient ultrasounds
- Stethoscope Module (contact type) for monitoring internally generated ultrasounds
- Spare Battery Pack
- Warble Tone Generator
- Deluxe Noise Isolating Industrial Headset for use with hardhat
- LRM Long Range Module To Increase Detection Range
- Spectralyzer Sound Analysis Software
- Ultratrend Data Management Software
- I/O Cable (9 pin to 9 pin connection cable)
- Compact Flash Card
- Battery Recharger
- RAS-MT Magnetic Sensor with BNC Connection readable with the Ram Module
- RAM Adaptor enabling the UP10K to read RAS sensors
- Flash Card To USB Reader (allows reading of flash card to PC via USB port)
